SUMMARY

Full-stack engineer with 6 years shipping production web applications and backend services end to end on TypeScript, Node.js, and React/Next.js. Built authentication, RBAC, approval, and event-driven systems from scratch on Node.js and PostgreSQL that now run across 15+ live products. AI-native in how I work: I use LLMs daily and designed and shipped v1 of an agent — LLM orchestration, tool and workflow execution, and prompt and context management — to pre-production. Comfortable owning medium-to-large features from API and data model through frontend, with a focus on scale, reliability, and clean, reviewed code.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React, Next.js, Vite, Module Federation (microfrontends), Material UI, Ant Design, Tailwind CSS, HTML5, CSS3

Backend: Node.js, Express, NestJS, REST APIs, microservices, event-driven architecture, backend architecture patterns

AI-Native: LLM integration, agentic workflows (orchestration, tool use, memory), prompt engineering, RAG and embeddings, multi-model providers (OpenAI, Claude, Grok), AI-assisted development

Databases: PostgreSQL, Redis, SQL, Sequelize, schema and data modeling, query optimization, indexing, migrations

Architecture & Practices: System design, distributed systems, SOLID, OOP, Git and code review, CI/CD, testing, production monitoring and incident response

Auth & Security: Custom JWT (asymmetric keys), Argon2, OAuth / SSO, MFA, RBAC, session management, VAPT remediation

Cloud & Messaging: AWS (Lambda, S3, Amplify, Cognito), RabbitMQ, Socket.IO, Firebase Cloud Messaging

WORK EXPERIENCE

SUCH AI

November 2025 – Present

Full-Stack Engineer (Backend & Platform) Mumbai, India

- Designed and shipped v1 of an LLM agent to pre-production — orchestration, tool and workflow execution, and prompt and context management — bringing an AI-native approach to enterprise automation, and wrote the PRDs behind it.
- Generalized the RBAC, approval, and notification platform I originally built into domain-agnostic services, now running across 15+ production products (15 web apps and 2 mobile apps) so teams ship features without rebuilding auth or workflows.
- Replaced vendor-locked Cognito auth with a custom authentication and authorization layer using Argon2 hashing, asymmetric public/private-key JWTs, and device fingerprinting; rolled SSO out to 5+ products and addressed findings from VAPT security testing.
- Designed a 15+ table PostgreSQL schema for a legal document-lifecycle microservice with a JSONB-based state-machine trigger, an outbox pattern for reliable cross-service events, and deferred foreign keys for circular references.
- Built a transaction-safe distributed audit trail with audit mirroring, event queues, and idempotency, and owned services through production monitoring and incident response.

Shapoorji Pallonji Finance (SPFPL)

July 2022 – November 2025

Senior Software Developer Mumbai, India

- Built the company's RBAC, multi-stage approval engine, and event-driven notification system from scratch on Node.js and PostgreSQL, with permission-driven dynamic UI rendering, forming the foundation later reused across the product ecosystem.
- Owned full-stack features end to end — React frontends through Node.js APIs and PostgreSQL data models — and built customer-facing products as React microfrontends with Module Federation.
- Delivered the authentication platform on AWS Cognito (MFA, SSO, concurrent-login detection, session management); fixed a Cognito custom-message Lambda race condition by dropping an external API call and resolving user identity via clientMetadata, cutting billed Lambda duration.
- Migrated 3 products off deprecated Create React App to Vite — roughly 4,000+ files each plus a shared UI component library — with no feature regressions.
- Integrated my RBAC and approval engine into a separate team's struggling project end to end and had it live in 2 weeks, letting them ship features faster under stricter auth policies.

Pangea Tech

2022

Software Developer Bangalore, India

- Built full-stack features for the TuringXai data platform covering data processing, analysis, and visualization, turning designs and wireframes into production React code.

Avotrix Technology (Sony Pictures Networks)

2020 – 2022

Software Engineer Mumbai, India

- Developed and supported web and mobile features on a PLC-based platform and resolved UI, process-flow, and reporting defects across Android, iOS, and web.

Techera IT Consultancy (L&T Technology Services)

2019 – 2020

Software Engineer Mumbai, India

- Tested mobile telecom features across LTE, GSM, VoWiFi, VoLTE, and 3G/4G and supported the Zebra Hawkeye Qualcomm baseline-upgrade project.

PROJECTS

Distributed Event-Driven Notification System *RabbitMQ, Node.js*

- Built a real-time notification service for web and mobile that cut duplicate notifications by 40% through idempotent message handling, with consumer retry strategies, dead-letter queues, and priority-based routing.

EDUCATION

Bachelor of Engineering, Electronics Vivekanand Education Society's Institute of Technology (VESIT), University of Mumbai 2019
